by [Renew Grid](#) on Tuesday 22 December 2009

Intwine Connect, a company focused on connectivity interfaces, server architecture and consulting services, has [introduced the MyIntwine Personal Energy Network](#), a "consumer-controlled, Internet-connected ecosystem of retail distributed home energy management devices."

"MyIntwine Personal Energy Network empowers consumers to monitor their own energy consumption and control their usage by either implementing a personalized 'set and forget' profile or engaging in real-time, interactive personal energy management over the Internet," says Dave Martin, president and CEO of Intwine Connect.

The network currently includes the Intwine Connected Thermostat (available through a partnership with [Radio Thermostat Company of America](#)) and the Intwine Connected Whole-House Power Monitor (from [Blue Line Innovations](#), maker of the PowerCost Monitor). The company says additional connected devices will be added to the ecosystem throughout the next several months, including products from [Monster Cable](#).
