

**March 8, 2011**

**Blue Line is pleased to announce that the most recent firmware version available for download has expanded Kh functionality!**

To meet the requests of some users whose Kh values listed on their utility meters fell outside the typically 1.0 or 7.2, the Wizard will now accept values up to 99.9.

While rare, in cases where the service is set at 400amps, and/or "Multx" is noticed on the meter/bill, this increase will allow for the online applications to accurately reflect the usage in the graphs without having to worry about scaling the values yourself manually.

As always, Blue Line is striving to meet the requests and demands of our valued customers and we welcome any feedback, questions, or comments, either toll free or: [support@bluelineinnovations.com](mailto:support@bluelineinnovations.com)

Regards,

Blue Line Customer care
